

# Tencate Recovers from Ransomware with Zerto: A Before and After

## About TenCate

TenCate, a multinational textiles company based in the Netherlands, experienced ransomware attacks twice. The first attack occurred prior to implementing Zerto, a Hewlett Packard Enterprise company, and the second one after the Zerto implementation. Their experience recovering from ransomware using backups the first time vs Zerto the second time reveals the power of the Zerto platform to help TenCate recover quickly.

## Before

One of TenCate's manufacturing facilities was hit with CryptoLocker. All of the file servers were infected. At this point, TenCate's only recovery method was restoring from disk. As a result of this attack, TenCate experienced 12 hours of data loss and were not able to recover for two weeks.

## After

Directories on a file server in a manufacturing facility were hit by a more advanced form of CryptoLocker. TenCate only experienced 10 seconds of data loss and were able to recover in under 10 minutes.

*Honestly, in the recent attack, I was kind of laughing during the recovery. I knew I had a way out with Zerto. I was confident, and my heart didn't sink. I chose a recovery point a few minutes before the infection, tested for the VM being clean and connected the vNIC - back to work. I didn't go home worried, stressed or depressed.*

Jayne Williams | Sr. Systems Engineer, TenCate

a Hewlett Packard  
Enterprise company
