In today’s always-on business world, your customers, partners, and employees expect 24/7 access to services and data. Unplanned downtime from natural disasters, cyber-attacks, and outages are your biggest availability threats. With an effective disaster recovery plan and solution in place, your organization becomes resilient and able to easily resume operations with minimal downtime and data loss. Zerto, a Hewlett Packard Enterprise company, solves these challenges and enables your organization to recover from a disruption or an outage with the lowest recovery point objectives (RPOs) and fastest recovery time objectives (RTOs) in the industry, dramatically limiting your risk of data loss and downtime.

Zerto for Disaster Recovery provides the following features:

- Single, unified experience across all supported platforms, including VMware vSphere, Hyper-V, Microsoft Azure, AWS, Google Cloud, Oracle Cloud, IBM Cloud, and over 350 managed service provider partners who offer disaster recovery as a service (DRaaS)
- Simple, software-only platform using built-in orchestration and automation to reduce the time, resources, and cost of performing failovers, failback, and testing

What Makes Zerto Different?
Continuous Data Protection

Thousands of recovery points
- Always-on replication creates thousands of recovery points, just seconds apart, for granularity with industry-leading RPO’s; that delivers the best of synchronous and asynchronous replication
- Journal-based recovery to easily select granular checkpoints every 5 seconds
- Rewind and restore to recover entire sites, applications, VMs, and files

Hardware-agnostic and technology-agnostic
- Hypervisor-based replication works with both VMware vSphere and Microsoft Hyper-V, with no impact to production environments
- Seamless integration for any on-premises infrastructure and cloud target site
- Software-only with always-on replication, removing the need for scheduling, agents, and appliances

HIGHLIGHTS

- **RPOs of seconds**: Recovery from thousands of checkpoints, seconds apart
- **Software-only**: No appliances, agents, or vendor lock-in
- **Cloud-ready**: Move and protect workloads to the cloud of your choice
- **Install in minutes**: Easily install Zerto into any enterprise environment without downtime
- **Orchestration and automation**: Simple workflows to perform moves and failovers in a few clicks
- **Compliance reporting**: Perform DR tests without any disruption and get automatic delivery of compliance reporting
Application-centric recovery

- Protect multi-VM applications as one cohesive unit for simple, consistent recovery
- Recover large enterprise applications quickly, from any point in time, with the fastest RTOs in the industry

Simplicity

- Fast installation to be up and running in minutes
- Easy-to-use interface offers centralized management and one experience, whether on-premises or in the cloud
- Full orchestration and automation remove manual processes, taking the pain out of DR operations
- Automatically protect VMs to ensure complete, flexible data protection across your environment even when new VMs get added

Cloud-ready

- Total flexibility for DR to the cloud of choice; Zerto supports private, hybrid, and public clouds such as Azure or AWS, 350+ managed service provider partners, or VMware on public cloud with the Azure VMware Solution, Google Cloud VMware Engine, Oracle Cloud VMware Solution, or IBM Cloud
- Multi-cloud agility unlocks DR to, from, and between any of the listed cloud environments, and simply add new cloud targets as your cloud strategy evolves
- Purpose-built for the cloud; leverages native cloud services for resource management, auto-scaling, and cost-effective storage—with limitless burst capacity and no running VMs until needed during failover

Analytics and reporting

- Built-in analytics provides unparalleled multi-site visibility, including a mobile app for monitoring SLAs from anywhere
- Zerto Resource Planner enables accurate infrastructure planning using real-world application data; predict and size DR needs based on both protected and unprotected VMs for on-premises and cloud
- Detailed reporting across all resources and recovery operations ensures the right data is available when needed, whether for compliance, auditing, or performance analysis

Data Protection Platforms

- VMware vSphere 6.0 and higher
- Microsoft Hyper-V 2016 and higher*
- Microsoft Azure
- Amazon Web Services
- VMware on Public Cloud
  - Azure VMware Solution
  - Google Cloud VMware Engine
  - Oracle Cloud VMware Solution
- Microsoft Azure Kubernetes Service (AKS),
- Amazon Elastic Kubernetes Service (EKS),
- Google Kubernetes Engine (GKE),
- IBM Cloud Kubernetes Service (IKS), and
- Red Hat OpenShift
- Zerto Managed Service Providers

Supported Cloud Management Systems

VMware vCloud Director 9.1 and higher

Supported Guest OS

Zerto supports protection and recovery of any guest OS that is supported by the underlying platform.
How it Works

Zerto’s software-only platform ensures enterprise-class protection of your environment no matter the size with components that include:

- Our scale-out replication appliance with built-in WAN optimization, encryption, and Quality of Service, replicates every change generated in real time to the target journal and is responsible for copying data to the long-term retention repository.
- The Journal contains all changes that occurred to any protected entity and allows you to use that data to restore to any point-in-time with seconds of granularity.
- The management server integrates with any hypervisor management platform and has an intuitive interface that orchestrates user-initiated operations with simplicity.
- A long-term retention repository allows you to store data for years on cost-effective disk, cloud or object storage.

In public clouds, an all-in-one cloud appliance combines management and replication components. It integrates natively, using cost-efficient storage offerings, APIs, and cloud scaling features.
