

“We’ve done failover tests using Zerto, and within 10 or 20 minutes all of our servers will be up and running in Azure, and all the applications are working. I’m quite happy using Azure and Zerto, as Zerto offers the kind of protection that was previously only possible for large companies.”

Industrial Solutions Company Bolsters Cyber Resilience with Zerto and Azure

A major industrial solutions enterprise began using Zerto to deliver on client expectations. Their collaborative approach and dedication to going the extra mile throughout every phase of a project earned them the trust of many energy companies across their region, and they needed to ensure that their IT systems reflected and protected those relationships.

As part of this dedication to customer satisfaction, the company’s IT team looked to bolster their IT and cyber resilience. Prior to working with Zerto, they used tape-based backup; however, they now sought a more reliable solution that would allow them to withstand operational risks from any unplanned IT disruptions.

“I always felt nervous that something could happen to our datacenter and we wouldn’t be able to get back up and running. I used to lose sleep over it,” said one member of the IT team.

The team committed to moving part of its on-premises datacenter to the public cloud using Azure, which led them to implement Zerto’s IT solution. Using Zerto, they now have continuous replication—and the critical business applications, file systems, and ERP servers used by the organization’s DevOps groups have unmatched protection.

Prior to using Zerto, the company was the victim of a ransomware attack that required dozens of labor hours to identify and resolve with their old manual recovery processes. Now, in the event of a ransomware attack the IT team can keep the company’s systems fully operational with zero downtime thanks to Zerto.

The enterprise has also benefited from Zerto’s easy-to-use testing features, as well as its ability to quickly recover files.

In the future, the company looks to expand its use of Zerto, replacing its on-site datacenter and storing everything in Azure.

About Zerto

Zerto, a Hewlett Packard Enterprise company, empowers customers to run an always-on business by simplifying the protection, recovery, and mobility of on-premises and cloud applications. Zerto’s cloud data management and protection solution eliminates the risks and complexity of modernization and cloud adoption across private, public, and hybrid deployments. The simple, software-only solution uses continuous data protection at scale to converge disaster recovery, backup, and data mobility. Zerto is trusted by over 9,500 customers globally and is powering offerings for Microsoft Azure, IBM Cloud, AWS, Google Cloud, Oracle Cloud, and more than 350 managed service providers. www.zerto.com
