# PeerStory: Zerto

This PeerStory is a collection of quotes from a real user sharing their experience using Zerto on PeerSpot.

Justin C.
Director of IT at Arnott Inc

★★★★⯪

Use Case

We have installed Zerto software on the DR site and the production site. We will be using Zerto for the production site for all the centrally used applications, such as SAP, file servers, and Exchange. Because this is a central site, a lot of other sites come to this site for various things.

Valuable Features

In terms of providing continuous data protection, **Zerto has been great so far… It's very capable**. I've also done a couple of test scenarios on ransomware reaction where I'll go in and restore a folder, after hours when nobody is in the system, to emulate a situation where we might need to go back and restore kit encrypted files. So far, it's been great.

Results

[Zerto] enables me to make a strong case to my board of directors… I have been highly recommending [Zerto] to them. It's a reasonable cost, it provides several layers of protection from ransomware, and

> **"When you need to fail back or move workloads, Zerto significantly decreases the time it takes."**

> **"We also have Zerto on the DR site. In manufacturing, there are 60 or 70 tools, and each tool costs around $500,000."**

if necessary, against natural disasters. I'm very happy to say that **Zerto is one of those layers and provides us with very good protection** for what it specifically does.

ROI

I would estimate that if I had to recover from a scenario like the last one that affected us, **it would take me 10% to 20% of the time it took me** at that time. That reduces the amount of time that our system is down and, therefore, the amount of money we're losing because our system is down.
