Valuable Features

The RTO and RPO are the most valuable features. I get six-second snapshots for every single time that data gets replicated. I can go back six seconds past whatever happened. The frequency of the snapshots depends on your latency. It could be as frequent as every two seconds.

Results

We have had many instances where VMs were corrupted by an application owner, where they were installing something and did not create a snapshot in VMware for it. Instead

“It helps a lot in the day-to-day running of our business.”

Use Case

We purchased Zerto for our business continuity and DR approach to make sure that workloads are available. We have 1,000 servers but are only protecting 250 of them because they are our core servers. The ones we don't currently protect are Tier three applications.

“Zerto helped us reduce downtime and we have been able to recover VMs fairly quickly by just clicking two buttons.”

of tapping into our backups, **with just two clicks, we were able to restore the VM back to its original state.**

ROI

We have experienced ROI using this solution. It helps a lot when we use Zerto to test out certain applications. It **offers a lot of value for our upper management** to see how this product helps us in the event of a DR.
